

Artificial Turf Improves Batting Cages

Published: June 30, 2016 - Watersavers Turf

Why Artificial Turf Belongs in Your Batting Cage

While tossing the ball around at the park is a lot of fun, it's not always easy to find time. Busy lives often keep us from doing the things we love. What if you could create your very own ballpark right in the privacy of your backyard? You would never have to miss another chance to play with your kids. It turns out; you can have the look and feel of a real ballpark right at home with the help of a batting cage and some quality artificial turf. It's simple. Watersavers Turf can help you create an attractive and practical playing area where time is on your side. Our sports turf is the perfect choice for this type of project; it needs no water or care and always looks green and inviting. Artificial turf provides all the benefits of real grass without the work, giving you more free time to relax and have fun.

All About Batting Cages and More

Batting cages are sometimes equipped with hand-fed or automatic ball-pitching machines. These were first made by a mathematics instructor named Charles Hinton in 1897 to provide the baseball team at Princeton University a better way to practice. They are easy to operate, and the speed can be adjusted to match the playing level of the athlete.

The batting cage was invented over a hundred years ago by a man named Wellington Titus in 1907. At the time, these devices were called "baseball backstops" and were quickly adopted by players because they were portable and convenient. These days, modern batting cages are a bit different. They are fully enclosed by nets and are lined with artificial grass. The overall style of the netting and turf can vary to suit different needs.

The turf in a batting cage, also known as artificial grass, was first invented in 1960 by a man named David Chaney in North Carolina. It was commonly known as Astro Turf and was used to line giant stadiums like the Astrodome. Today, you can find this turf everywhere: golf courses, tennis courts, and batting cages. It has remained a popular sports product because it's not pricey and needs no real maintenance or water. It also creates a safer playing field by getting rid of uneven surfaces, and the cushion of the shock pads under the turf helps reduce serious injuries.

The Health Benefits of Artificial Grass:

Artificial grass is forever green and lasts longer than real grass. When purchased from a premium seller like Watersavers Turf, the product is always free of lead and crumb rubber. Faux lawn not only looks great, but it also offers a lot of health and money-saving benefits.

- 1) It wipes out allergy-causing weeds.
- 2) It removes harmful chemicals such as pesticides and fertilizers.
- 3) It needs no mowing or watering.
- 4) It greatly reduces the overall cost of owning a lawn.

News

The City of Fremont has five new batting cages in the Northgate Community Park, all of which will open this month, in addition to the two new synthetic turf fields already at Fremont's Central Park. Whether the sport is baseball, softball, or cricket, kids and adults can now enjoy practicing and playing in batting cages year round.

Safety Tips

Here are some safety tips to keep in mind when using a batting cage:

- Cages are made for one batter at a time.
- Players should always wear helmets.
- Young children should be watched at all times.
- Use equipment properly.

Choosing the right product for your project can be easy and enjoyable. Our experienced team can help you choose the right type of synthetic grass for your new batting cage(s).
