Get a Perfect Lawn Using Synthetic Artificial Turf

The drought may be over, but now people in the SF Bay Area have another problem: it won't stop raining. Fall and winter have been rough for the region. This weather has damaged lawns throughout the state. That's why it's a good time to think about getting synthetic artificial turf for your home. When this type of weather strikes, people need to reseed their lawns or simply rip them out. Either way, it can be costly to maintain a yard over time. With synthetic artificial turf, it's not an issue. This surface is built to stand up to harsh weather. It looks perfect all year long. You don't even need to water it! (That's not a problem now, of course.) To help homeowners make the switch, [Watersavers Turf](#) stocks a wide range of synthetic artificial turf products.

Artificial Grass Benefits All Property Owners

Our products offer many artificial grass benefits to homeowners and business owners. We offer an 18-year residential warranty (10-year commercial), the only one of its kind in Northern CA. When you buy from us, we will refer you to a professional installer. If you are a contractor, we will teach you how to install faux turf for Free! Besides all of that, our turf is lead-free and non-toxic.

Whether you own a home or business, there are many artificial grass benefits you can rely on. When you own a home, you want your lawn to look its best simply because you take pride in it. Doing this is costly. When you own a business, you need your property to look great to attract customers. This means spending a lot of money on upkeep over time. Real grass lawns need a lot of care every day and even more during a drought or after heavy rains. There are many artificial grass benefits to keep in mind, but the one to remember most is that it gives you more control. You don't need to let Mother Nature design your yard. You can handle it yourself.

Fake Grass Means Money Saved

No matter what kind of property you own, you can save a lot of money when you install fake grass. The weather in the SF Bay Area and the rest of CA is never easy to predict. For months, there's barely a drop of rain. The next thing you know, it won't stop.

Some towns and cities in the state still have water usage limits in place. They can't be sure that the drought won't return without warning. That's why it costs so much money to keep a yard in good shape around here. You can never know what type of weather you'll have to be ready for.

When you install fake grass, your lawn will remain in great shape in all weather. These products come in many different colors and styles. It's easy to find the option that's perfect for your property. With fake grass, you can add an outdoor dining space at your café, a perfect green lawn at your office, or a gorgeous yard at your home. No matter how you use it, you'll reduce your bills.

Unlike real grass, you don't need to mow it, water it, or do much else except rake/broom it now and then. The money you save—not to mention the time—would make it easier to take a trip with your family, make an important purchase, hire a new staff member, etc. The uses and benefits for our product are almost endless.

Synthetic Turf Uses Are Many

Synthetic turf uses aren't just limited to sports. It's true; these products are a great option for teams. Since they remain even and flat in all weather, there's less risk of a tripping injury. They also help reduce the number of games that get canceled due to rain. But there are many other synthetic turf uses that people should keep in mind.

It's become common for those who own homes to install outdoor lounge areas with chairs and sofas on their lawns. This is perfect for homes in CA, with its warm climate. But keeping those spaces in good shape is not easy. That's why many have opted to use faux grass. It lets them realize their landscape design goals with ease.

These products are also ideal for a business owner. It's been shown that workers who are given a chance during the day to enjoy being outside in a calm space are more likely to be happy and engaged on the job. With faux grass, you can give them a place to relax. If you own a café, turn that unused section of property into extra seating.
