

Artificial Fairway Turf Is Here to Stay

Published: April 27, 2017 - [Watersavers Turf](#)

Golf fans all over the world are probably wondering if Sergio Garcia could be inducted into the World Golf Hall of Fame after winning the 2017 Masters championship. Well, unfortunately for this 37-year-old, the minimum age to be inducted is 50. He's probably not disappointed though, after receiving the largest payout in Masters history, \$1.98 million! It was only in the '90s when the winner's payout was a mere \$500,000. This is just another sign that golf has become a very popular sport.

That's why golfers and [Watersavers Turf](#) both know that artificial fairway turf is here to stay. However, there are many other good reasons. In much of the country, springtime is when golf season begins. The opening of the season is often marked by wet and muddy courses. So being able to practice and/or play on artificial fairway turf can mean more time for golfers to enjoy the game. It used to be far less common to see driving ranges and putting greens made of synthetic grass. Now that it's used all over the US, artificial fairway turf is helping more players to improve their skills.

You Don't Have to Be a Pro to Have a Backyard Putting Green

Even casual golfers are using it to have a private putting green at home. [Indoor putting mats](#) have become more popular, as well. The artificial grass being offered today is a far cry from the plastic version of years past. With the look and feel of real grass, it's clear that these latest styles are designed to be here to stay.

The quality, affordability and easy care offered by the new turf products are the reasons that they are so popular. They make sense for those living in areas of the US where conserving water is critical. They also make sense for those who don't want to deal with the mowing, watering and weeding that a real lawn needs.

If you haven't taken a close look at how far synthetic grass has come, you're in for a surprise. At Watersavers Turf, a premier supplier of these products, our many varieties surprise people all the time.

Why It's Time to Use Artificial Turf for Golf

If it's good for the planet, then it's time to use artificial turf for golf. By cutting way down on the water usage at golf courses, synthetic grass helps to create positive change. Even little changes made by using synthetic grass can make a big difference. One example would be the use of artificial turf for golf putting mats. These golf mats can be used for practice just about anywhere to improve putting skills. Better putting leads to fewer strokes and lower scores. Another example would be the use of artificial turf for golf driving ranges. The more often golfers can practice their driving skills, the better their scores will be.

The use of artificial sports turf can be a boon to many games. It continues to replace real grass at stadiums all over the country. Golf courses are starting to catch up with their use of synthetic sod. At public and private courses in many towns and cities, it is being used to improve older courses and bring them back to life. A great example of this type of effort can be found at the [Newport Beach Golf Club](#).

Maybe artificial grass is already being used at the public course or country club you play at. If it's a recent addition, then you have seen for yourself how much better it has become. One thing's for sure: if you keep playing golf, you'll be seeing more of it.

Will it change the game for the better? Most would agree that in some ways, it already has. It's allowed people to improve their skills and enjoy golfing more often.

Synthetic Golf Greens Are Sprouting Up All Over

At Watersavers Turf, people have been stopping by to check out our synthetic golf greens and other products. Spring is the start of a new golf season for many people, and they are excited to get out and play whenever they can. If you're thinking about adding a practice green to your yard, we can help you.
